

**Goal** • Use this page to review your understanding of the organ systems of the human body.

### What to Do

With a partner, read through the following list of tissues, structures, and organs. Sort them in their appropriate organ systems. The boxes below the list represent organ systems, and you can place the names of organs inside them.

When you have completed this, try to answer the question on how organs need to work together.

#### 1. List of Tissues, Structures, and Organs

brain	liver	nerves	pancreas	small intestine
spinal cord	tongue	heart	blood	stomach
arteries	lungs	trachea	nasal passage	esophagus
biceps	veins	capillaries	bronchus	alveoli
tendon	hamstring	villi	gall bladder	diaphragm

2. With your partner, discuss and record your thoughts on the following ideas:  
“Organ systems do not function independently—they fit together like pieces to a puzzle.”
